

Multi-Strategy Performance Report

Systematic India & Global Equity Research · As of 24 Jul 2026 · Base: INR / USD-normalized

VALIDATED EDGE INSIDE

Prepared on proprietary
point-in-time data

STRATEGY A — CORPORATE-ACTION INTIMATION DRIFT

FLAGSHIP · FDR-VALIDATED

NET ROI / EVENT (SPLIT) +10.3–13.7% after all costs, per event	HIT RATE (SPLIT) 83% n = 258 events, 10y	STATISTICAL STATUS BH-FDR q=0.05 survivor / 18-hyp family	MEDIAN ALL-IN COST ~1.0% spread + impact + comm.	CAPACITY ~₹10 Cr/yr split leg @ ₹2Cr/pos
---	---	--	---	---

LEG	N	GROSS/EVT	NET/EVT	HIT%	HOLD TD
Split	258	+16.5%	+10.3–13.7%	83%	50
Bonus provisional	295	+10.4%	+8.0%	75%	35

Enter intimation + 2 td, exit ex-date – 1. Abnormal return vs daily market median, split/bonus-adjusted prices, fully point-in-time (broadcast timestamp).

Filter & discipline

Trigger	Board-meeting intimation: bonus / split / sub-division
Entry / Exit	Intimation + 2 td → ex-date – 1
Executability	Position ≤ 10% of 120d median turnover
Benchmark hurdle	Daily cross-sectional market median

LIVE WATCHLIST — BUY / HOLD / SELL (POSITION LIFECYCLE VS EX-DATE)

SYMBOL	INTIMATION	KIND	ADV ₹CR	STATUS	ACTION
AASTHA	20 Jul	bonus	2.7	fresh (day +3)	BUY-ELIGIBLE
GOODLUCK	07 Jul	bonus	18.6	mid-window	HOLD
TEMBO	11 Jun	split	6.1	mid-window	HOLD
HARDWYN	29 May	bonus	11.1	mid-window	HOLD
CORDELIA	08 Jul	split	124.5	liquid, weaker drift	HOLD (light)
NARMADA	25 May	split	1.8	near ex-date	REDUCE
TCC	16 Jul	split	0.3	fails ADV cap	SKIP

Buy/Hold/Sell = lifecycle vs ex-date, not a valuation rating. Cross-check each vs screener.in before acting (standing rule).

STRATEGY B — MULTI-MARKET DARVAS MOMENTUM SCAN

RESEARCH FUNNEL · UNCOSTED

MARKET	HORIZON	N	MEAN	HIT%	MEDIAN EXCESS	SHARPE
US	+5d	9,066	+1.33%	58%	+0.11%	1.08
US	+21d	1,751	+2.90%	66%	+2.10%	0.62
India	+21d	3,158	–0.33%	46%	–0.40%	–0.13

US Darvas works; India Darvas does not on this window — a finding only visible by marking recommendations to realized forward returns. Gross, equal-weight, uncosted: a watchlist generator, not a P&L.

NEGATIVE RESULTS REPORTED (DISCIPLINE, NOT OMISSION)

Announcement-sorted PEAD: Q5–Q1 spread +0.86% / 63d — **fails FDR**. · Post-ex-date drift: ≈0% (47% hit) — no edge. · Factor-combo grid (Piotroski / ROCE / debt-reduction × market): **0 of 12 cells survive FDR q=0.10**. Reporting these is mandatory under the same multiple-testing discipline that validated Strategy A.

Disclosures. Not investment advice or a solicitation; prepared as proprietary research, not a GIPS-compliance claim or a registered PMS/AIF disclosure. Figures are realized backtest / research statistics on internally-recorded signals over a single ~10-year sample; the split leg is validated (matched turnover-decile benchmark, quarter-clustered t = 5.8, survives Benjamini-Hochberg FDR at q=0.05 across an 18-hypothesis family), the bonus leg is provisional. Returns are abnormal vs daily market median on split/bonus-adjusted prices, pre-tax; Strategy A is net of a modeled cost (Corwin-Schultz spread + Amihud impact + 0.2% round-trip commissions, 10%-of-ADV participation cap), Strategy B is gross. Annualized figures scale a single-cycle return by holding period and are illustrative only — the edge is capacity-bound and not compoundable at that rate. Past performance does not predict future results. Methodology: price_adjuster*.py, pit_event_studies.py, cost_intimation_drift.py, validate_intimation_drift.py; claims ledger in global-market-data/claims.yaml. Report structure follows GIPS 2020 + SEBI PMS reporting conventions (gross & net, stated benchmark, mandatory negative-result disclosure).
